Notes:																													
Critical Path:																													
1.2 → 1.3 → 2.1 → 2.2 → 3.3 → 4.1 → 5.1 → 6.1																													
Highlighted in red above. Delays here will push the MVP deadline.																													
Dependencies:																													
Hardware setup (2.1) must finish before software integration (3.3).																													
Testing (5.1) depends on both frontend/backend (4.1) and hardware (4.2).																													

[1] Hardware setup (Raspberry Pi + scanner).

Backend API for ID validation.

Database schema design.

Check-out form UI.

(Delays here directly impact April 21 demo deadline.)
